

1.1) Inline connector settings:

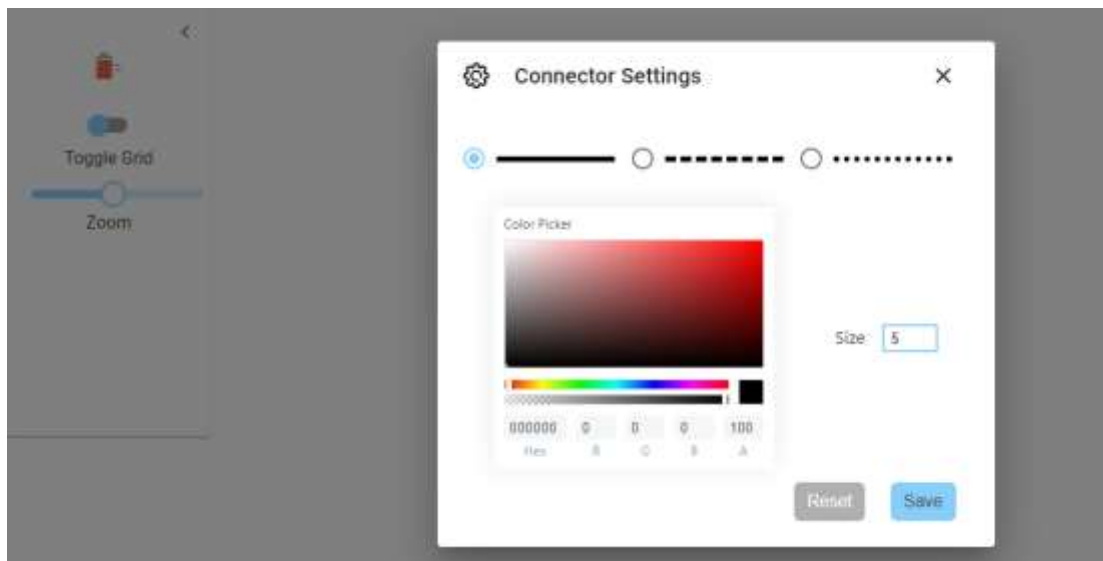

Deleting connectors:-Deleting a connector from a right click dropdown menu option.

Inline editing of connector arrows direction/type and other present connector settings:- Inline settings editing of the connector arrow direction and type (double/single/no arrow connector type) and all the already present settings in connector settings.

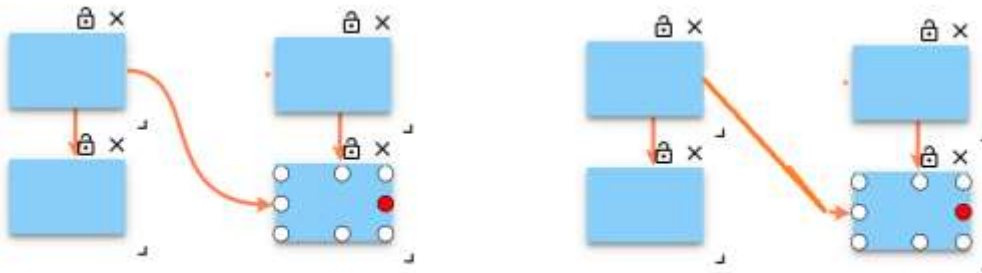

Adding the below general connector settings to inline connector options.

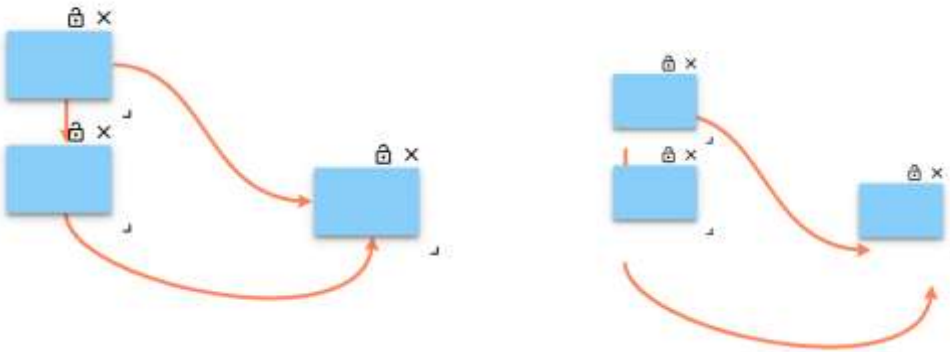

Moving the endpoints(in relation to shapes connector points) of connectors:- moving the already rendered connectors to new position with a drag and drop functionality.

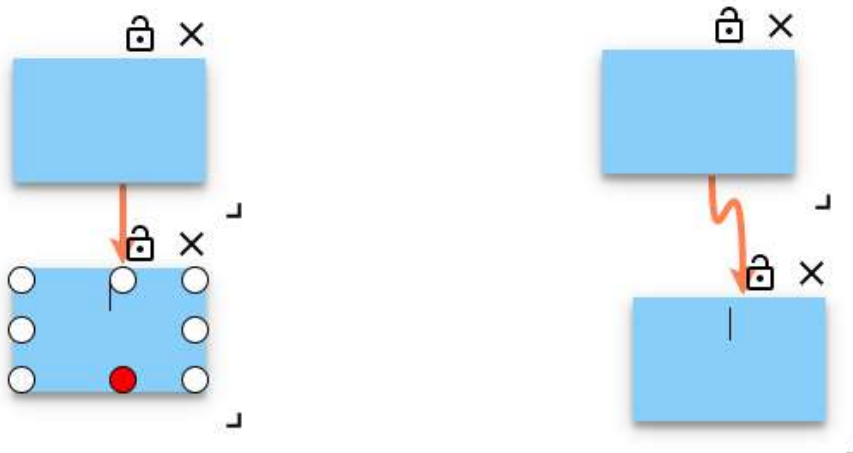

Moving the connector path shape:- Changing the shape of the connector after the auto rendered shape when connecting two shapes.

Zooming:- Zooming the connector lines relative to the zooming of shapes

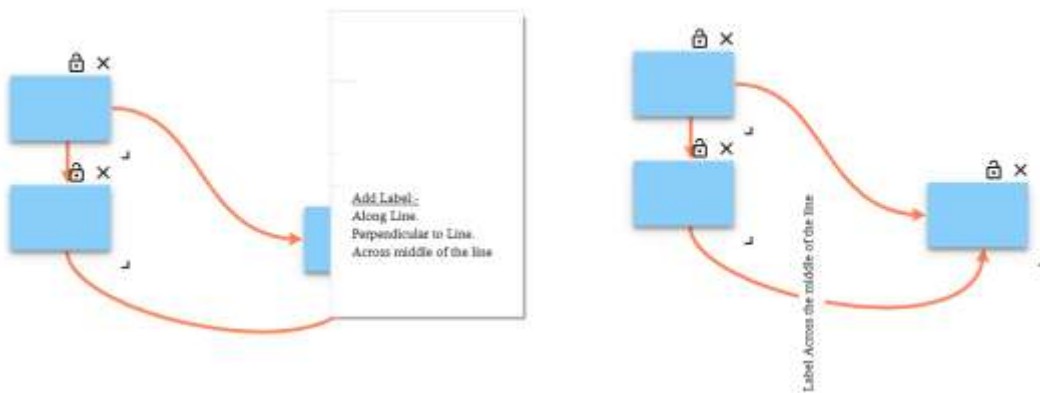

Minimum line distance:- Maintaining a minimum line length relative to the distance between the two shapes connecting it.

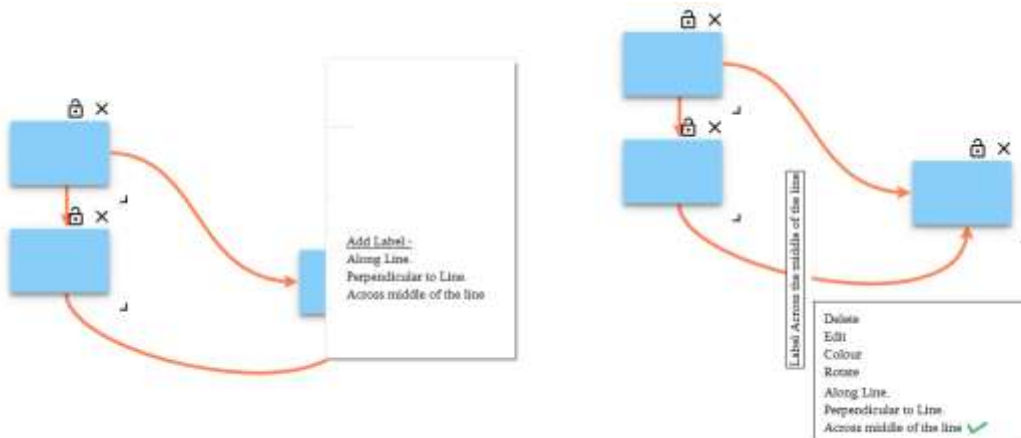

2.1) Labelling:

Movable labelling with auto positioning:- On clicking any one of the 3 options it would render a text box with a basic wysiwyg text options. this label would be movable and dragged around the screen.

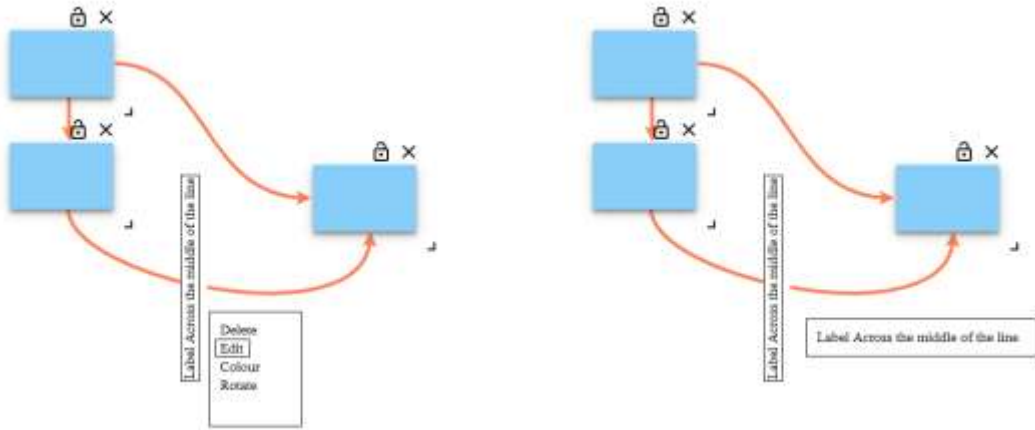

Delete, Edit, Colour change and rotate on labels:- The inline options would be Delete, Edit, colour change and setting default colour, label rotate and changing the positioning of the label.

The label position is detected as "across middle of the line option" so it has a green tick mark against it on the right click menu dropdown, this can be changed to the other 2 position

options.

On Triggering Edit

On triggering rotate it would have an option to rotate inline (click and rotate).

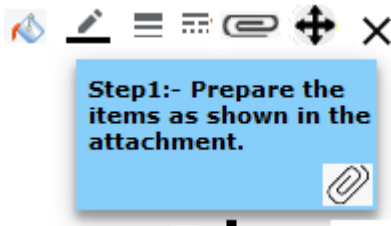

3.1) Inline text:

Adding (with CRUD) a moveable text element with a basic text wysiwyg editor.

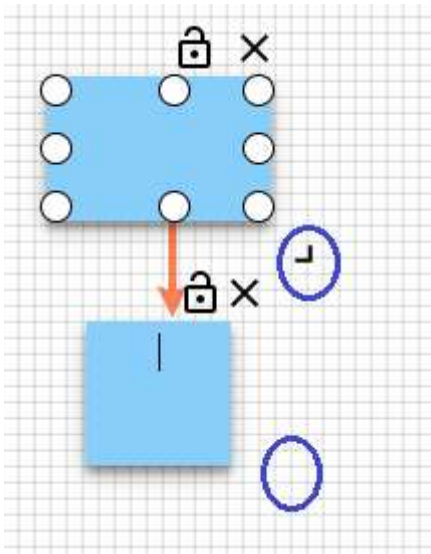

4.1) Shapes:

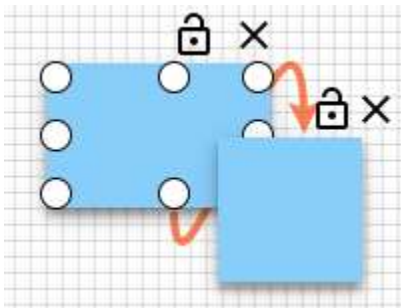

Shape attachment:

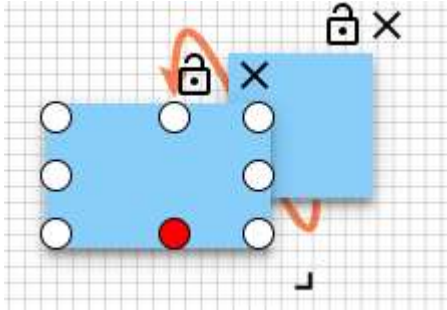

Adding the same resize function of rectangle shape to all the other shapes.

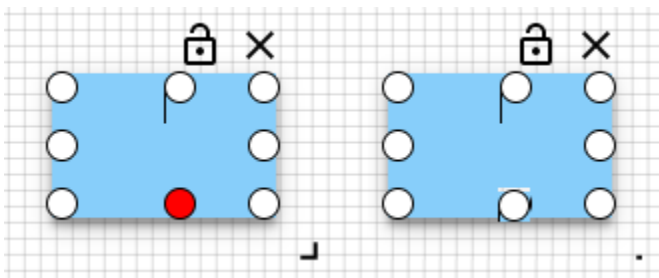

Shape send to back and front for each shape.

Toggle connector circle on each shape to render the next shape with out auto connector render.

5.1) Workspace:

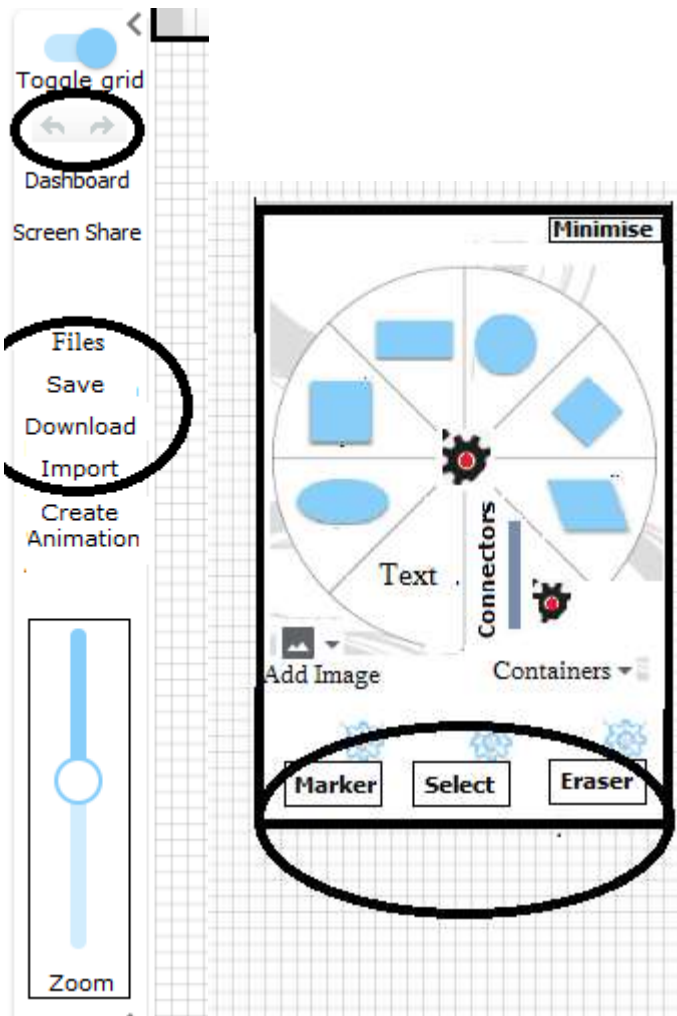

Workspace undo/redo function.

Freehand pen with eraser.

moving function (hand icon) of entire workspace.

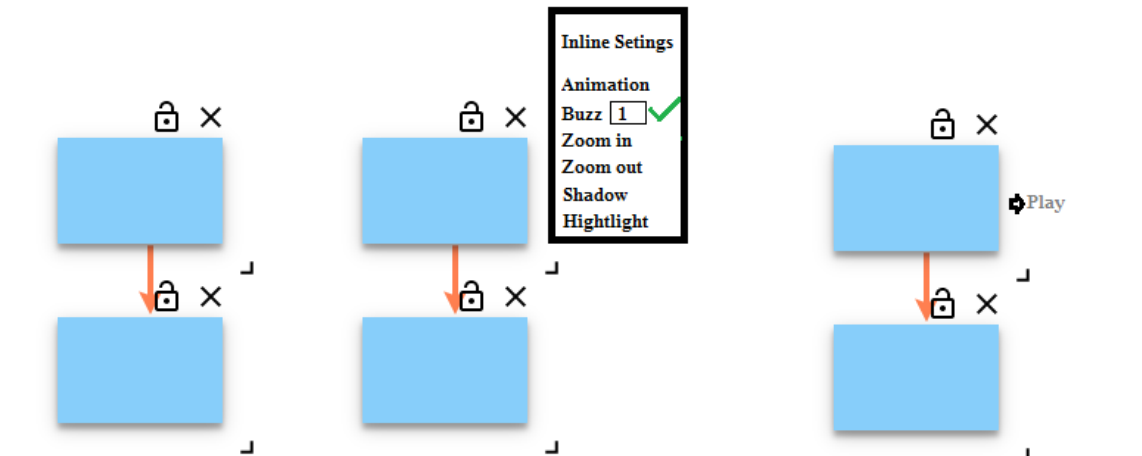

Downloading the workspace flow diagram as an html file.

Auto Save on server.

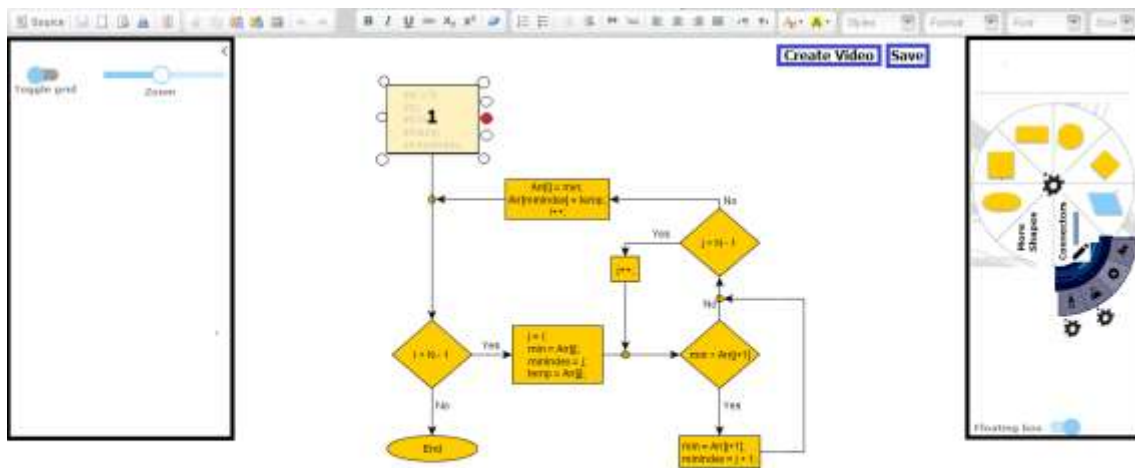

5.2) Element Animation:- Basic inplace animation of elements (shapes, text and connectors) like buzz, zoom out etc. these animations could be added as a right click option on shapes/connectors/text and triggered on clicking the now rendered play animation adjacent to the shape/connector/text.

The number next to "buzz" is the number of times (simple duration) to trigger the animation.

6.1) HTML to Video Conversion

7.1) Account Management:

Website Registration/Login:-

OAuth SSO option- fb, google, linkedin login

Manual Email login- with email confirmation.

Super User Admin:- List of all user with the following details.

Username:- email address.

Password reset option for each user with new password sent to user email.

Plan details:- Subscription/free account.

User activity:- number(count) of files created, screen shares sessions and audio calls.
